Frequently asked questions

I have completed the treatment but I can still see live lice in the hair. What should I do?

Sometimes the treatment has not had sufficient contact time with live lice and they appear to move quite slowly. These lice are dying and should be removed with the fingernails.

I can still see eggs attached to the hair the following day. Has the treatment failed?

Not at all, the remaining 'eggs' or nits which are visible are either dead or empty shells. Simply remove with the fingernails.

I use Quit Nits treatment but my child came home from school re-infested two days later. Is it safe to use Quit Nits again?

Quit Nits does not contain any toxic pesticide so it is safe to use as frequently as required.

The kit does not contain a bedding spray. Why not?

Head Lice can only feed on a human host and they need to feed hourly to remain hydrated. About an hour after being separated from the host they begin to dehydrate and become ill. After 24 hours they will die. Simply laundering and drying head scarves, hats or pillow covers is sufficient to kill lice. Using bedding sprays only increases your child's exposure to pesticides.

If I'm pregnant or breastfeeding can I use your product?

Unlike pesticide based products, Quit Nits products do not contain any ingredient that is suspected of causing health problems for pregnant or nursing mums. The products should be safe to use except in circumstances where there is a history of allergy to essential oils. If in doubt consult your doctor.

I have read that some essential oils can be poisonous. Is Quit Nits safe to use?

Quit Nits contains essential oils in concentrations which are considered by authorities to be well within safety limits. If you are allergic to essential oils, you should consult your doctor before use.

I suffer from asthma. Can I use your product?

Quit Nits products do not contain any ingredient that is known to cause attacks in asthma sufferers. The products should be safe to use except in circumstances where there is a history of allergy to essential oils. If in doubt consult your doctor.

Why should the cap be removed overnight when using the Advance product?

Although it is important to keep the Advance Treatment wet, it is essential to remove the shower cap from your young children to avoid risk of suffocation while sleeping.

I have used head lice treatments before and the hair was left dry and brittle. Will this happen with Quit Nits?

Quit Nits products will leave the hair soft and shiny just like a regular conditioner.

Some facts about lice

Head Lice

Head lice live on the scalp and lay small white eggs (nits) on the hair shaft close to the scalp. The nits are most easily found on the nape of the neck or behind the ears. All personal headgear, scarves, coats, and bed linen should be disinfected by machine washing in hot water and drying, using the hot cycle of a dryer for at least 30 minutes. Personal articles of clothing or bedding that cannot be washed should be put in a sealed plastic bag for 48 hours. Personal combs and brushes may be disinfected by soaking in hot water (above 130° F) for 5 to 10 minutes. Thorough vacuuming of rooms inhabited by infested patients is recommended.

Other information

- Keep carton for important product information.
- Protect from excessive heat.
- Do not freeze.

WILD CHILD
Born, not made

Product of USA. Not tested on animals.

Caring for your child, naturally

Leanne Preston - Founder

For Wild Child, success has come naturally. Founded in Margaret River, Western Australia, by Leanne Preston in 1997, Wild Child has become a world presence in natural health care for children.

Concerned by the chemical nature of traditional Head Lice treatments and an absence of a natural alternative, Ms. Preston formed Wild Child with the objective of finding an effective natural treatment.

As a result, Quit Nits was the first natural Head Lice product sold in Australia. From humble beginnings to global success story, Wild Child products are now sold in over 14 countries throughout the world.

"At Wild Child we have always been concerned with the unnecessary use of dangerous chemicals in our world. We believe that by making a very large number of small changes we can significantly reduce environmental damage."

Wild Child's contribution to this philosophy is the creation of our natural range of products. Wild Child family products are formulated towards the maximum utilization of natural and nature identical ingredients. The elimination of enviro-toxic chemicals in everyday household products is just the sort of small change that could make a difference."
